

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of reducing blood clots in a mammal comprising:
concurrently administering to the mammal a therapeutically effective amount of a combination
of a compound selected from the group consisting of pyridoxal-5'-phosphate, pyridoxal,
pyridoxamine, a 3-acylated pyridoxal analogue, a pharmaceutically acceptable acid addition salt
thereof, and a mixture thereof, and a cardiovascular compound selected from the group
consisting of pyridoxal phosphate-6-azophenyl-2',4'-disulphonic acid (PPADS) and an
~~antithrombolytic~~ anti-thrombotic agent.

2. (Original) A method according to claim 1, wherein the 3-acylated pyridoxal analogue is a
compound of the formula

wherein

R₁ is a straight or branched alkyl group, a straight or branched alkenyl group, in which
an alkyl or alkenyl group may be interrupted by a nitrogen or oxygen atom; an alkoxy group; a
dialkylamino group; or an unsubstituted or substituted aryl group.

3. (Original) A method according to claim 1, wherein the 3-acylated pyridoxal analogue is a
compound of the formula

wherein

R₁ is a straight or branched alkyl group, a straight or branched alkenyl group, in which an alkyl or alkenyl group may be interrupted by a nitrogen or oxygen atom; an alkoxy group; a dialkylamino group; or an unsubstituted or substituted aryl group; and

R₂ is a secondary amino group.

4. (Currently Amended) A method according to claim 1, wherein the ~~antithrombolytic~~ anti-thrombotic agent is an antiplatelet agent, aspirin, or heparin.

5. (Currently Amended) A method according to claim 1, wherein the compound is administered enterally or parenterally and the ~~antithrombolytic~~ anti-thrombotic agent is administered enterally or parenterally.

6. (Currently Amended) A method according to claim 1, wherein the compound and the ~~antithrombolytic~~ anti-thrombotic agent are administered in a single dosage form.
